

PIP 700 SERIES SUBMERSIBLE SUMP PUMPS REPLACEMENT PARTS GUIDE

While PACO PIP 700 Series Submersible Sump Pumps are designed and built to provide maximum life while requiring minimum attention and service, replacement parts may at times be required to restore performance.

Should impeller replacement or level control replacement be required, the following repair kits are available in kit form for "off the shelf" delivery:

PUMP MODEL	KIT NUMBER	DESCRIPTION
PIP 700, PIP 700a	K700	Impeller Kit
PIP 701, PIP 701a	K701	Impeller Kit
PIP 702, PIP 702a	K702	Impeller Kit
PIP 700b, PIP 701b, PIP702b	N/A	Impeller Kit
PIP 700c, PIP 701c	N/A	Impeller Kit
ALL	40032623	15' Liquid Level Control
ALL	40035079	20' Liquid Level Control

Each of these Impeller Kits contains: impeller, lockwasher, impeller screw, gasket, and housing screws.

#40032623 and #40035079 are PACO Solofloats. This control type is a direct acting mercury-switch tilt bulb device with a piggy back plug, suitable for operation on 1 phase, 115V circuits. It replaces the diaphragm type switch, which is no longer available.

Replacement pumps are recommended in the event of seal failure, motor failure or damage to housing/motor. PIP 700 Series Submersible units are available "off the shelf".
